

Application Challenges of IoT Deployments

Dr. CH Cheng

Director of Research and Technology Development at LSCM

The Pivotal Role of Hong Kong The Greater Bay Area The Pivotal Role of Hong Kong The Pivotal Rol

- HK residential buildings and infrastructure are constructed near the natural hillsides
- Heavy rainstorms or seasonal typhoons imposes considerable landslide risks to the public
- Debris-resisting barriers have been built on natural hillsides to reduce the risk of landslides to safeguard the public
- No immediately notifying system on this barriers

Rigid debris-resisting barrier

Flexible debris-resisting barrier

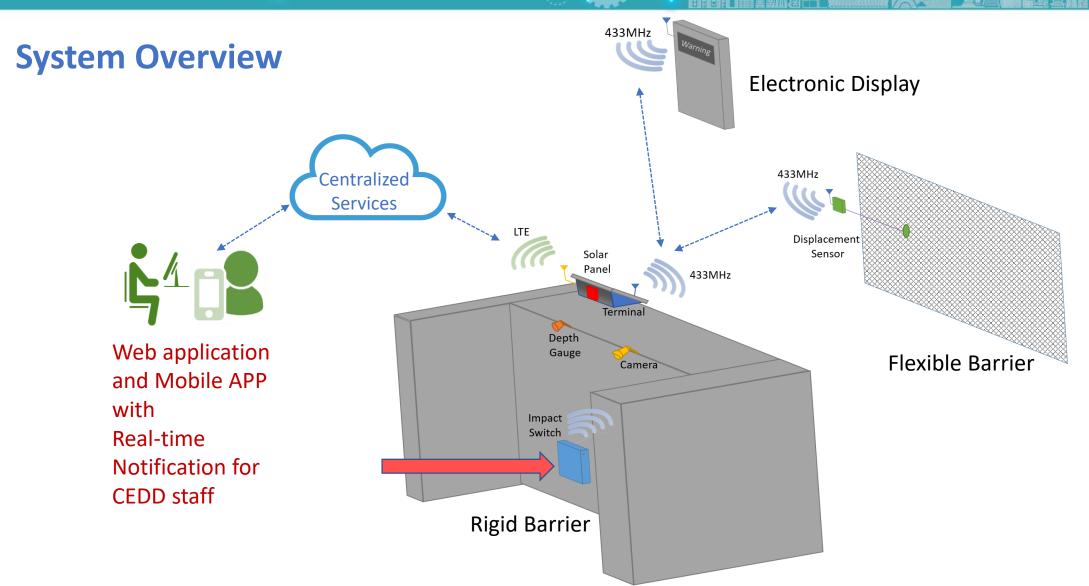

Challenges

- Uninterrupted Power Supply
 - 7 days running without sun light
- Reliable Communication
 - Local wireless network & 4G Network
- Robustness
 - Long hot and rainy summer
- Simple installation
 - Steep slopes and rough terrain

Smart Traffic Control System

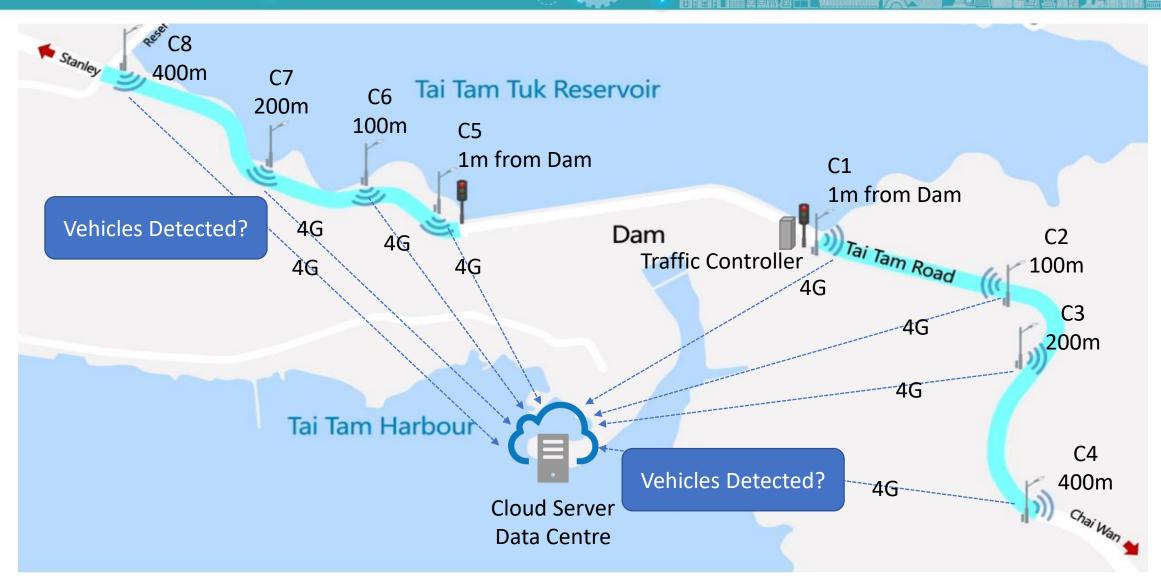

(with support from Transport Department)

- Attempt to address a long-standing traffic problem at Tai Tam Road (Dam Section)
- Intelligently control traffic light to improve road safety and increase traffic flow

The Pivotal Role of Hong Kong The Pi

Challenges

- Seamless Integration with the existing traffic control
- Reliable Communication
- Privacy Guarantee
- Uninterrupted Power Supply
 - Rechargeable Battery
 - 3 days running without electricity
- Functioning under extreme weather conditions

Operational since 25 Aug 2018

Average time required to pass the dam

Conventional Traffic Signal Smart Traffic Control

呢D唔係咩新技術,不過拖左咁耐香港 終於有少少智能交通都算係咁... 希望盡快配合埋行人斑馬線實行到各區

45秒預設等候對頭車時間是浪費,因為 45秒是以很慢的車作基準,在水壩路段 應該裝置探測器,以確認對面線轉紅燈 後最後一架車是否已經通過,把45秒等 候時間因應車流縮短。

吧啦, 學咩人上網上facebook?

新界西北應該全部轉用呢類交通燈

动喧豗敌笼短的人, 怀问卫汝置除及动

"以前無產假, 我老母咪一樣生到我出來,

而家根本一日產假都太多"一樣.一樣咁

白痴. 你班友番去跟你太公用毛筆寫字
